

Wifi Pen

With the extraordinary increase of the demand for mobile computing systems (and thus, also of the number of such devices), WiFi networks have also become quite popular. One of the most serious problems faced by the users of such networks is that of finding an area where the signal is strong enough to allow a decent connection to the Internet. That's exactly the reason why all sorts of devices that indicate the quality of the signal have been developed, one of the most interesting being the Wifi Pen.

COST: Rs. 400/-

MERITS:

1. USER FRIENDLY: The device is quite user-friendly, since it works by simply pressing a button, and, depending on the signal's intensity, a Green/Yellow/Red LED lights up.
2. GOOD DETECTION RANGE: The device has a detection range of up to 15 meters
3. ACCESSORIES: a white LED at the top, which can be used as some sort of pen-lantern. And, quite surprisingly, it can also be used for writing.

DEMERITS:

1. Used only by a specific group of people.
2. Frequent battery change required.

3. Range reduces with the battery power getting reduced.
